Lab 05

React Router, Formik and Yup

Instructions

In this assignment you will add React Router, Formik and Yup to the React application. Using your Lab 1, 2, 3 for continuing this Lab.

Objectives and Outcomes

A. React Router

You will add React Router for showing the detail information of a orchid by the detail component, the contact component. At the end of this assignment, you should have completed the following tasks:

- Redesigning some components at routes: Index (path="/"), Detail (path='/detail'), Natural (path='/naturals'), Contact (path='/contact).
- Created the naturals component to show only natural orchids (using isNatural value) when you click to Natural button via the parameter of URL.
- Created the detail component to show the information orchid when you click to Detail button via the parameter of URL.
- Create the contact component to show the contact page.
- Using the React Router for your React application

B. Formik and Yup

Build the Contact Form and validation using Formik and Yup. You will install and configure Formik, Yup and use it within your React application.

Assignment Requirements

- Use React router to create paths for components and transition between components.
- Use React form or Formik and Yup to build and manage Contact form.
